

Java Assignment - Cinema Ticket Booking System

Objective

Write a Java program that simulates a simple cinema ticket booking system using functions, arrays, loops, and conditional statements.

Program Requirements

The cinema has 5 rows and 6 seats per row.

Use:

```
char[][] seats = new char[5][6];
```

```
String[] movieNames = {"Superman","Avatar","Minecraft","Inside Out","F1"};
```

Initially all seats contain 'O' (Available). Booked seats contain 'X'.

User will enter seat number. Ex: **12** where “**1**” represents No. of row and “**2**” represents No. of column

Main Menu

1. Display Seats
2. Book Seat
3. Cancel Booking
4. Show all movies.
5. Show number of available and booked seats
0. Exit

Features

- Display all.
- Book a seat after validating row and seat numbers.
- Cancel an existing booking.
- Display booked seats, available seats.
- Exit the program with a goodbye message.

Input Validation

Validate row numbers (1-5) and seat numbers (1-6). Display 'Invalid Seat.' for invalid input.

Bonus Challenges

- Take number of rows & columns that will represent the seats.
- Take number of movies and their names.
- Display 'Almost Full' when occupancy exceeds 80%.
